

## black-throated blue warbler *Setophaga caerulescens*

Kingdom: Animalia

Division/Phylum: Chordata

Class: Aves

Order: Passeriformes

Family: Parulidae

ILLINOIS STATUS common, native

### FEATURES

The black-throated blue warbler is about five and one-fourth inches long (tail tip to bill tip in preserved specimen). The male has blue and black feathers with white belly feathers and a white wing spot. The female has olive-colored feathers, a dark patch of cheek feathers and a small patch of white feathers in the wing. She also shows a small, white line over the eye.

### BEHAVIORS

This species breeds in northeastern North America. It overwinters near the Caribbean Sea. Illinois is west and south of its main migratory flight path. Spring migrants start arriving in Illinois in late April. Fall migrants begin returning to Illinois in August. These birds eat insects and fruits.

### HABITATS

Aquatic Habitats

**bottomland forests**

Woodland Habitats

**bottomland forests; coniferous forests; upland deciduous forests**

Prairie and Edge Habitats

none
