

Canada milk vetch

Astragalus canadensis

Kingdom: Plantae
Phylum: Magnoliophyta
Class: Magnoliopsida
Order: Fabales
Family: Fabaceae

ILLINOIS STATUS

common, native

FEATURES

Canada milk vetch is a perennial herb. Its pinnately compound leaves have small, oval leaflets in seven to 15 pairs. Leaves are arranged alternately along the stems. The five-petaled, pealike flowers are pale yellow or white. The fruit is a pod that contains seeds. This plant grows to about four feet in height.

BEHAVIORS

Canada milk vetch may be found throughout Illinois. It grows in prairies and thickets. Flowers are produced from June through August.
