

twin-leaf

Jeffersonia diphylla

FEATURES

Twin-leaf flowers are white and have eight petals. The distinctive leaves have the appearance of being almost completely pinched into two parts in the center, leading to the name of "twin-leaf." The plants are about eight inches tall when in flower but will grow to a height of about 16 inches.

BEHAVIORS

Twin-leaf is a member of the barberry family of plants. It grows in woodlands and blooms in April and May. It is rarely found in the southern one-third of the state but is fairly common in the northern two-thirds of Illinois.

TAXONOMY

Kingdom: Plantae
Division: Magnoliophyta
Class: Magnoliopsida
Order: Ranunculales
Family: Berberidaceae

ILLINOIS STATUS

common, native
