

yellow bass

Morone mississippiensis

Kingdom: Animalia
Phylum: Chordata
Class: Actinopterygii
Order: Perciformes
Family: Moronidae

ILLINOIS STATUS

common, native

FEATURES

The yellow bass has a blue-gray back and striped, yellow sides. The dark stripes appear to break and are not in continuous lines on the lower body. A spine is present on the gill cover. The average size for this fish is 12 inches in length and one pound in weight. It may live for about six years.

BEHAVIORS

The yellow bass lives in pools and backwaters of rivers and lakes. Spawning occurs April through May. Eggs are deposited over gravel and will hatch in four to six days. The yellow bass lives in schools in midwater or near the surface. Adults eat fishes, including their own young.

ILLINOIS RANGE

Permanent

adult
