Re: Inventory of Remnant Prairie Sites, Knox County, IL

Dear Don:

It is a pleasure to mail you the summation of the work on the Prairie-Woods Environmental Coalition Project, an Inventory of the Prairie Remnants of Knox County, Illinois.

Enclosed is a map marked with significant sites. Also marked on the map are other sites that thrilled our members who scouted out the prairie areas. We found large areas and then we found small exquisite places that had to be marked for later observation and encouragement. We found prairie flowers where we had never observed any growing in years before.

People have remarked that this was the most stunning summer yet for color and variety. One couple who moved here from Kentucky told us that there wasn't anything like the prairie where they came from!

We are all able to name the prairie grasses with ease so the fun and surprise of the project was finding the flowers in such profusion. Everyone who participated in the discovery and identification is now "hooked."

One of the results we had hoped for with the project was to stir up a continuing interest for more study of these sites in the years to come. Now it's like we can't wait for next June and July.

We are going to keep very accurate records for referral and the public is welcome to our field notes and analysis.

We are not sure if you want us to send you each individual site notation or not. If it is ever on your itinerary, you

could meet with our group and we can set up more of a scientific analysis of this county for your department. Please advise us.

We enclose a county map marked with numbered sites and a list of the exact locations inventoried.

We are satisfied that the prairie grasses are making a very good recovery here in Knox County. Based on our observations noted in the inventory, our real push will be to interest landowners and the public about the value and uniqueness of the prairie forbs.

Where the majority of the townships have been surface mined for coal, we found fewer varieties of flowers. It is as if not much drifts in there from other places or that that nature sows doesn't catch. Multiflora and thistle are the predominant species on those abandoned lands.

We are very much interested in expanding and promoting the inventory. We believe that we can use it to protect what we have found. Systematically we plan to pay return visits to the sites marked.

An added bonus of this work is a lease agreement the Coalition signed with the Burlington Northern Railroad for the management of ten acres of prairie land at the edge of the City of Galesburg, in Galesburg Township.

I certainly hope that the enclosures meet with your approval. If there are additions or corrections to be made please advise me. The Coalition wants to thank the Non-Game Wildlife Check-Off Fund for the opportunity it gave us to inventory the remnant prairie sites in Knox County.

Very truly yours,

Janis King, Vendor
Prairie-Woods Environmental Coalition.

Help needed on nature inventory

Editor, The Register-Mail: Recently the Prairie-Woods Environmental Coalition, a local regional group of educators and conservationists, received a grant from the Illinois Department of Conservatin's Non-game Check-off Program to conduct a comprehensive Knox County-wide survey of the remaining remnants of native prairie vegetation. We are quite proud to be one of the top 10 projects selected from hundreds of proposals submitted from around the entire state.

Since this is basically a volunteer project and a labor of love for those already involved, we are asking that if anyone is interested in helping us out with the inventory — scouting out potential sites in various townships, contacting landowners or just to offer moral support — to come join us. Your assistance would be greatly appreciated and the experience in this local "treasure hunt" promises to be an exciting learning experience.

We are also trying to locate sites within Knox County, of which we are presently unaware, that may turn out to be significant natural areas. These areas may be found in an odd corner or a remote open hillside of someone's property that has never been plowed or intensely used. Recently abandoned pastures or savannas with scattered oak and hickory trees that have never been plowed, even though they are "brushy", may harbor native prairie. Railroad right-of-ways and early pioneer cemeteries are often excellent spots to find prairie.

We are also attempting to inventory (and ultimately protect by encouraging proper mangement) the last remaining populations of rare, threatened or endangered species of such plants as Prairie White Fringed Orchid, which was once documented as occurring in the county, but has not been verified for decades.

Between now and Aug. 31, 1990, we will be scouting the Knox County countryside. We are presently doing the fall inventory and are especially interested in finding volunteers to scout Salem, Maquon and Copley townships.

If you would like to help with what we feel is a significant project, and perhaps the last opportunity to discover and to inventory the last fragments of our valuable prairie resource, please contact us at 289-4770 or 639-2254.

The big fish scare 199

THE CHILLY winds of September are bringing lunker Chinook salmon closer to Lake County's Lake Michigan shore. It's a time when the snagging season gets under way and shore anglers have a chance for a trophy fish. It's a time perchmen have one of their last open water flings before their thoughts turn to ice fishing on the inland lakes. It's a time to take the kids to the shore or on a charter boat for a morning or afternoon of traditional family fun.

It's also the time the National Wildlife Federation would have us believe eating only one meal of any Lake
