This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Gus Novoa Chicago, IL 60637

DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, James Wauer Chicago, IL 60637

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Joey Knotts Chicago, IL 60605

Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Kathy Machaj Chicago, IL 60607

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Ken Buck Naperville, IL 60540

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Ken Buck Naperville, IL 60540

Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Leilani Douglas Chicago, IL 60637

The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Luz Magdaleno Chicago, IL 60632

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Maryann Condren Naperville, IL 60540

Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Mike Benz Chicago, IL 60645

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Nancy Onderdonk 1456 W Granville Chicago, IL 60660

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Nancy Penney Monticello, IL 61856

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Nour Abdelmonem Chicago, IL 60637

I LIVE IN CHICAGO - THERE SIMPLY WAS NOT ADEQUATE NOTICE PROVIDED - AND THEN, THE SELECTED HEARING DATE WAS JUST TWO DAYS BEFORE THANKSGIVING. TO MAKE MEANINGFUL COMMENTS, ONE NEEDS TO BE FAMILIAR WITH AND UNDERSTAND: \* THE 123-PAGE HYDRAULIC FRACTURING REGULATORY ACT; \* 135 PAGES OF PROPOSED RULES FOR THE HYDRAULIC FRACTURING REGULATORY ACT; AND \*16 PAGES OF PROPOSED RULES FOR SEISMICITY. IS THE IDNR REALLY INTERESTED IN OBTAINING COMMENTS FROM CONCERNED RESIDENTS, ENVIRONMENTAL ORGANIZATIONS, SCIENTISTS, HEALTH PROFESSIONALS AND EDUCATORS - OR, IS THE IDNR FAST-TRACKING THE PROCESS ON BEHALF OF THE INDUSTRY? UNFORTUNATELY, THE LACK OF ADEQUATE TIME AND THE FACT THAT THE COMMENT PERIOD COINCIDES WITH THREE MAJOR HOLIDAYS RELAYS THE LATTER. ADDITIONAL HEARINGS SHOULD BE HELD, WITH PROPER NOTICE, TO ENSURE THAT ALL INTERESTED AND POTENTIALLY AFFECTED PARTIES HAVE ADEQUATE TIME TO PREPARE COMMENTS AND ADJUST SCHEDULES SO THAT THEY CAN ATTEND.

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Patrick Dexter Chicago, IL 60615

Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Rachelle Ankney Chicago, IL 60626

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Rebekah Sugarman Syosset, IL 11791

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Sandeep Malladi Chicago, IL 60637

DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Scott Condren Chicago, IL 60608

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Shaden Amara Naperville, IL 60564

Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Simone Serhan Chicago, IL 60605

But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Stanley Archacki Westmont, IL 60559

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Stanley Archacki Westmont, IL 60559

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Vincent Beltrano Chicago, IL 60615

DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, William LaBounty Chicago, IL 60615

In reference to Subpart A: General Provisions (245.100-245.120)

This comment is in response to the paragraphs of the published notices setting the dates for the public hearings on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: DNR did not provide the required public notice for any of the public hearings, because in each case the notice for the hearing was not published in the Illinois Register at least 20 days before the hearing. Although the Illinois Administrative Procedure Act allows DNR to hold a public hearing, in response to a request for a hearing, less than 20 days after public notice in the Illinois Register if the notice of hearing is published in the notice of proposed rulemaking (5 ILCS 100/5-40), DNR has chosen by rule to require a minimum of 20 days' notice. DNR's adopted rule for scheduling public hearings states as follows: The Hearing Officer shall set a time and place for hearing and shall give notice as follows, at least 20 days prior to the date of the hearing; a) to the proponent, by mail; b) to members of the general public, by means of a general news release and notice in the Illinois Register. 2 Ill. Admin. Code 825.140. The first notice of public hearings--for Chicago and Ina--was published in the Illinois Register on November 15, 2013. But the Chicago hearing took place on November 26, 2013, and the Ina hearing took place on December 3, 2013. Each of those hearings was held on less than 20 days' notice. The second notice of public hearings--for Effingham, Decatur, and Carbondale--was published in the Illinois Register on December 6, 2013. But the Effingham hearing took place on December 16, 2013, the Decatur hearing took place on December 17, 2013, and the Carbondale hearing took place on December 19, 2013. Each of those hearings was held on less than 20 days' notice. Thus, DNR's public hearings were held in violation of its own administrative rules. These violations deprived the citizens of a meaningful opportunity to be heard. The remedy for this violation is either additional hearings in these areas, each with the required minimum 20 days' notice, or alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

In reference to Subpart A: General Provisions (245.100-245.120)

This comment relates to 245.100-.120. Operators should not be prohibited from fracking operations in active seismic zones, such as those around the New Madrid fault, and in flood plains, such as the Mississippi and Ohio flood plains. The potential for environmental disaster in these areas is too great to allow fracking.

Sincerely, Eileen Sutter 4125 North Monticello Chicago, IL 60618

In reference to Subpart A: General Provisions (245.100-245.120)

To the Illinois Department of Natural Resources, Before looking more closely and reading in between the lines, I was unaware of the potentially catastrophic connection between hydraulic fracturing in a tornado-ridden state. The number of tornadoes in Illinois within the last 10 years has topped in at 674. However, the number of draft regulations proposed by Illinois Dept. of Natural Resources describing safety measures regarding tornado strikes on fracking sites has topped in at zero. This just doesn't seem right.... From a historic perspective, the number and intensity of tornadoes in Illinois is actually quite high. Although hydraulic fracturing is not known to cause tornadoes, tornadoes are certainly known to occur where these fracking sites will be in Southern Illinois. Thus, appropriate precautions must be taken. A big swath of Washington, IL was flattened by a tornado on Sunday, 11/17/13. This makes me wonder what would have happened if this tornado had hit an area of the state covered in fracking sites? Debris from the tornados has been found over 150 miles away. I can only imagine if that debris had included "temporarily" stored flowback water or tanks filled with frack fluid or produced water! Overall, this could lead to further complications. I am obviously no expert, but it seems to me that something needs to be done, starting with this problem being addressed within the proposed rules and regulations. From there, safety precautions should definitely be outlined and followed in the case of such an emergency such as a tornado touching down or barreling towards an area with fracking sites. Please consider this possible complication if a tornado were to cross paths with a frack site in Southern Illinois. Tornadoes are already very destructive, so what would happen if a frack site's destruction is added into the mix? Thanks for taking the time to read this concern of mine and please, please outline a way to ensure optimal safety of people and the environment in such an instance as this.

Sincerely, Rebecca Quesnell 3 Talisman Trace Galena, IL 61036

In reference to Subpart A: General Provisions (245.100-245.120)

To the Illinois Department of Natural Resources, This comment concerns the public hearings held by DNR on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Section 5-40 of the Illinois Administrative Procedure Act provides as follows: At least one agency representative shall be present during the hearing who is qualified to respond to general questions from the public regarding the agency's proposal and the rulemaking process. 5 ILCS 100/5-40. At the public hearings in Chicago, (11/26/13), Ina (12/3/13), Effingham (12/16/13), Decatur (12/17/13) and Carbondale (12/19/13), DNR representatives were present on the panel, along with the hearing officer. However, at each of the hearings, the hearing officer made various statements that informed the citizens in attendance that the panel members would NOT answer questions. For example, the hearing officer stated that the DNR representatives were there to listen, that they would not respond to any comments, and that the hearing was not a question-and-answer session. Personally, I was at the Chicago hearing (held two days before Thanksgiving) on 11/26 and I did not have the opportunity to speak and voice any of my concerns along with not being able to address any of the inadequacies in the proposed rules and regulations. However, I did have the opportunity to hear other concerned, Illinois citizens voice their concerns, and without any response from the IDNR. At first, I did not realize that Section 5-40 of the Illinois Administrative Procedure Act required at least a general response to general questions asked and voiced during the hearings. This is completely unacceptable. Yes, those concerned with the process of hydraulic fracturing coming to Illinois (such as me!) can write comments, but although the IDNR is required to respond to each comment, I highly doubt that there is an entity supervising that and holding individuals accountable to respond to each comment. I guess the same is true for the public hearings, considering no questions were answered (as well as the fact that not all of us even got to directly make a comment to the IDNR during those hearings!). Thus, because the agency officials were not available to answer general questions regarding the proposal and the rulemaking process, these public hearings were held in violation of the Illinois Administrative Procedure Act. I feel that the only remedy for these violations is either additional hearings in Chicago, Ina, Effingham, Decatur and Carbondale or, alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period. Please consider this, as this was a violation, and thanks for your time in reading my concern with this (hopefully you did read this!)

Sincerely, Rebecca Quesnell 3 Talisman Trace Galena, IL 61036

In reference to Subpart A: General Provisions (245.100-245.120)

Unavailability of Agency Representatives to Answer Questions at Public Hearings How does this affect me: Who is in control Relevant parts of the Proposed Administrative Rules: Subpart A: General Provisions (245.100-245.120) This comment concerns the public hearings held by DNR on the Proposed Amendments to the Rules under the Oil and Gas Act and on the Proposed Rules under the Hydraulic Fracturing Regulatory Act. 37 Illinois Register 18081, 18081-82 (November 15, 2013); 37 Illinois Register 18097, 18099 (November 15, 2013); 37 Illinois Register 19746 (December 6, 2013); 37 Illinois Register 19747 (December 6, 2013). Comment: Section 5-40 of the Illinois Administrative Procedure Act provides as follows: At least one agency representative shall be present during the hearing who is qualified to respond to general questions from the public regarding the agency's proposal and the rulemaking process. 5 ILCS 100/5-40. At the public hearings in Chicago, (11/26/13), Ina (12/3/13), Effingham (12/16/13), Decatur (12/17/13) and Carbondale (12/19/13), DNR representatives were present on the panel, along with the hearing officer. However, at each of the hearings, the hearing officer made various statements that informed the citizens in attendance that the panel members would NOT answer questions. For example, the hearing officer stated that the DNR representatives were there to listen, that they would not respond to any comments, and that the hearing was not a question-and-answer session. Thus, because the agency officials were not available to answer general questions regarding the proposal and the rulemaking process, these public hearings were held in violation of the Illinois Administrative Procedure Act. The remedy for these violations is either additional hearings in Chicago, Ina, Effingham, Decatur and Carbondale or, alternatively, a new First Notice with the opportunity for new public hearings and a new public comment period.

Sincerely, Janet McDonnell 1322 North Vail Avenue Arlington Heights, IL 60004

In reference to Subpart A: General Provisions (245.100-245.120)

Whether working as an EMT or as a sergeant in the National Guard, safety of our people has always been of number one importance. No professional that I have ever worked with has been of the belief that accidents are not preventable. In fact, early on in basic training, I learned that all accidents are preventable, and safety precautions and rules must be put into place in order to protect those that work in hazardous conditions. Just because a person may work in hazardous areas does not mean that every reasonable effort to protect that person should not be put into place. Problems: The fatality rate of gas and oilfield workers is 7.6 times above all other industries and set an all-time high record in 2012 (King 2013). An inescapably dangerous work setting under the best of circumstances, frack pads are rendered even more dangerous by well operators who eschew workplace safety standards and who force employees to work excessively and dangerously long hours. Sixteen (16) to 20 hour work shifts can be scheduled with the end result that exhausted workers make mistakes in an unforgiving environment or fall asleep behind the wheel of a vehicle, often claiming their own lives and the lives of residents who happen to be on the wrong road at the wrong time (Urbina 2012). There are at least two work related dangers at frack pads that should fall under OSHA regulations: exposure to (1) radiation and (2) silica dust. Both can increase rates of cancer among exposed workers and both kinds of work-site related exposure are limited and regulated by OSHA. Yet, the oil and gas industry have found an easy way to escape regulation: simply don't test for work place exposure. Since there are no data on exposure, OSHA cannot step in and demand workplace fixes. Revisions needed: IDNR must require fracking operators to adhere to OSHA rule and regulations, especially regarding dust and radioactivity. IDNR must develop rules which recognize and regulate non-union frack operations to address inherently dangerous workplace conditions, including but not limited to work shifts, working conditions, and truck transportation to and from operations.

Sincerely, Bing Li Chicago, IL 60608

In reference to Subpart A: General Provisions (245.100-245.120)

With regards to worker safety, I'd like to direct you to the OSHA website, which states: From 2003 to 2010, 823 oil and gas extraction workers were killed on the job--a fatality rate seven times greater than the rate for all U.S. industries (Census of Fatal Occupational Injuries). This database also reports similar fatality rates since at least the early 1990s. Safety and health hazards and dangerous conditions that can result in fatalities for oil and gas workers include: Vehicle Accidents Struck-By/ Caught-In/ Caught-Between Explosions and Fires Falls Confined Spaces Chemical Exposures (<https://www.osha.gov/SLTC/oilgaswelldrilling/index.html>) Elsewhere on the site OSHA notes multiple health hazards associated with oil and gas drilling, including: Hydrogen Sulfide Silica Noise Diesel Particulate Matter Hazardous Chemicals Naturally Occurring Radioactive Material (NORM) Temperature Extremes Fatigue (<https://www.osha.gov/SLTC/oilgaswelldrilling/healthhazards.html>) There are also some helpful documents regarding silica and hydraulic fracturing. In a recent study of 116 samples from sites in Colorado, Texas, Pennsylvania, North Dakota, and Arkansas, OSHA discovered that: 47% showed silica exposures greater than the calculated OSHA PEL. 79% showed silica exposures greater than the NIOSH REL of 0.05 milligrams per cubic meter (mg/m<sup>3</sup>). 9% of all samples showed silica exposures 10 or more times the PEL, with one sample more than 25 times the PEL. 31% of all samples showed silica exposures 10 or more times the REL, with one sample more than 100 times the REL. ([https://www.osha.gov/dts/hazardalerts/hydraulic\\_frac\\_hazard\\_alert.html](https://www.osha.gov/dts/hazardalerts/hydraulic_frac_hazard_alert.html)) So it is clearly not uncommon for worker over-exposure to silica to occur in hydraulic fracturing sites. OSHA is very concerned about fracturing workers' exposure to silica for the following reasons: Hydraulic fracturing sand contains up to 99% silica. Breathing silica can cause silicosis. Silicosis is a lung disease where lung tissue around trapped silica particles reacts, causing inflammation and scarring and reducing the lungs' ability to take in oxygen. Workers who breathe silica day after day are at greater risk of developing silicosis. Silica can also cause lung cancer and has been linked to other diseases, such as tuberculosis, chronic obstructive pulmonary disease, and kidney and autoimmune disease. ([https://www.osha.gov/dts/hazardalerts/hydraulic\\_frac\\_hazard\\_alert.html](https://www.osha.gov/dts/hazardalerts/hydraulic_frac_hazard_alert.html)) Clearly, the hazardous nature of the work should require that IDNR, which is charged with protecting the health and safety of the Illinois people and environment, to regulate worker safety. IDNR must require fracturing operators to adhere to OSHA regulations, particularly with regard to dust and radioactivity. IDNR must also develop rules that regulate all fracking operations to address the myriad of hazardous workplace conditions, including, but not limited to, any of the items listed above.

Sincerely, Sara Buck Chicago , IL 60640

In reference to Subpart A: General Provisions (245.100-245.120)

You have a chance to alter the future for the better by putting more stringent regulations on fracking (or better yet seeking to halt it altogether). Seize this opportunity and let IDNR forever be remembered as standing on the right side of history in this battle. As not being afraid to stand up and make bold moves for what is right, despite pressure from the other side to stand down. Fracking is clearly a disaster waiting to happen. The alternatives have their faults as well, but we cannot wait or trust that the world will innovate our way out of the pending irreversible environmental damage to come as a result of fracking. Stand up, IDNR.

Sincerely, Kelsey Atkinson Evanston, IL 60202

In reference to Subpart A: General Provisions (245.100-245.120)

You said you did not use science. Listed below are earthquakes in Illinois compiled by the U.S. Geological Survey. Your rules need to be entirely rewritten to include geological and other scientific concerns. We need a scientific and neutral body of experts. Please read below to see how endangered and how fragile Illinois is. Read below to see how endangered you and I are.

1838 Jun 9 14:45 5.2M Intensity VII Southern Illinois ( 38.5N 89.0W ) Several catalogs place the epicenter of this earthquake near St. Louis, Mo., because of a report of a chimney being thrown down at St. Louis and because it was severely felt at St. Charles, Mo. Although reported effects do not support an intensity of VII, that intensity is assigned because of the similarity of the distribution of intensity to that of the earthquake of Oct. 8, 1857. Felt reports recorded at common points are one-half to one unit of intensity higher for the 1857 earthquake. Also felt in Illinois, Indiana, and Kentucky.

1857 Oct 8 10:00 4.9M Intensity VII Southern Illinois ( 38.7N 89.2W ) This severe earthquake was centered in the Mississippi River valley between St. Louis, Mo., and Centralia, Ill. At Centralia, the first of three reported shocks threw down chimneys; at St. Louis, it moved furniture, dislocated bricks, and felled plaster. The largest buildings rocked and articles fell from mantles. Reports indicate that the Mississippi River was in tumult. Felt in many towns in Illinois, along the Mississippi River south of Hannibal, Mo., in western Kentucky, and in parts of Indiana and Iowa.

1876 Sep 25 06:00 4.5M Intensity VI Wabash River Valley (Illinois) ( 38.5N 87.8W ) (06:00 and 06:15) These earthquakes were felt most strongly between Friendsville and Mt. Carmel, Ill., and Evansville, Ind. They were described as heavy at Friendsville. The second shock threw down chimneys at Vincennes, Ind., alarmed residents at Evansville, Ind., and caused slight damage at Louisville and Owensboro, Ky. They were felt from St. Louis, Mo., to Indianapolis, Ind., and Louisville, Ky.

1876 Sep 25 06:15 4.8M Intensity VII Wabash River valley (Illinois) ( 38.5N 87.8W ) See 1876 09 25 06:00.

1881 Jun 27 00:00 4.6M Intensity VI La Salle, Illinois ( 41.3N 89.1W ) Before daybreak, a shock in the southwest part of La Salle, about 90 km northeast of Peoria, formed six parallel fissures that were traceable for 183 m in a northwest-southeast direction. Walls, foundations and furnaces in bottle and glass factories cracked in many places.

1882 Sep 27 10:20 4.4M Intensity VI Southern Illinois ( 39.0N 89.5W ) A chimney was cracked severely at Greenfield, Green County, Ill., and a crack in the wall of a building was widened considerably at Salem, Marion County. People were awakened and small objects were displaced throughout the area. The felt area extended from Mexico, Mo., to Vincennes, Ind., and Henderson, Ky., in an east-west direction, and from Springfield to Pickneyville, Ill., in a north-south direction.

1883 Apr 12 08:36 Intensity VI Cairo, Illinois ( 37.0N 89.2W ) A strong local earthquake rattled windows for 30 seconds and awakened everyone in Cairo, in southern Illinois near the Kentucky-Missouri border. People were injured slightly in the collapse of an old frame house.

1887 Aug 2 18:36 4.9M Intensity VI Southern Illinois ( 37.2N 88.5W ) This severe shock broke windows at Cobden, Ill., cracked brick walls at Jonesboro, Ill., and Russellville, Ky., and loosened some plaster at Nashville, Tenn. Also felt in Indiana and Missouri and as far south as Huntsville, Ala.

1891 Sep 27 04:55 5.2M Intensity VII Near Mount Vernon, Illinois ( 38.250N 88.5W ) Several chimneys were toppled at Mount Vernon, and the ceiling and sidewalls of the Methodist Church were damaged. Chimney damage also was reported at Browns and

## Fair Economy Illinois

---

Nashville, Ill., and Cloverport, Ky. Plaster was knocked down at Jerseyville, Murphysboro, and Warsaw, Ill. Also felt in all or parts of Indiana, Iowa, Kentucky, Missouri, Ohio, and Tennessee. 1903 Feb 9 00:21 4.9M Intensity VII Mississippi River Valley (Illinois) ( 37.8N 89.3W ) This earthquake threw down chimneys in Jackson County at Grand Tower and Murphysboro, Ill., and damaged chimneys east of Murphysboro, at Carterville and Harrisburg, Ill. It was strongly felt from Jeffersonville, Mo. to Louisville, Ky., and from Cairo, Ill., to Hannibal, Mo. 1905 Aug 22 05:08 4.8M Intensity VI Southern Illinois ( 37.2N 89.3W ) Chimneys were shaken down at Cairo, Pulaski County, Ill, and about 40 km southwest, at Sikeston, Mo. Chimneys also were broken or partly collapsed at nearby Charleston, Mo., and about 175 km southeast, at Clarksville, Tenn. The earthquake was felt most strongly along the Mississippi and Ohio River valleys, including parts of Arkansas, Illinois, Indiana, Kentucky, Mississippi, Missouri, and Tennessee. 1909 Jun 26 14:42 5.1M Intensity VII Aurora, Illinois ( 41.6N 88.1W ) This earthquake has been related to the La Salle anticline in the Illinois Basin. Many chimneys fell, a stove overturned, and gas line connections broke at Aurora, west of Chicago. Several chimneys were downed at Forreston, Naperville, Streator, Triumph, and Troy Grove, and one fell at Waukegan. Brick walls cracked at Bloomington, and sidewalks cracked and many chimneys were damaged at Freeport. At Platteville, Wis., about 130 km northwest of Chicago, an old building was cracked; houses were jostled out of plumb at Beloit, Wis., about 240 km northwest of Chicago. Felt from Missouri to Michigan and Minnesota to Indiana. 1909 Jul 19 04:34 4.8M Intensity VII Between Havana and Petersburg, Illinois ( 40.2N 90.0W ) Chimneys were demolished on more than 100 buildings in Menard County at Petersburg, northwest of Springfield. At a farm west of Petersburg, 20 windows broke and bricks pushed out above the doors. Fallen chimneys also were reported northwest of Springfield at Davenport, Iowa, and west of Springfield at Hannibal, Mo. Several newspaper articles describe this earthquake but do not report property damage. 1912 Jan 2 16:21 4.5M Intensity VI Near Aurora, Freeport, Morris, and Yorkville, Illinois? ( 41.5N 88.5W ) The highest intensity was reported at those towns in Kane, Stephenson, Grundy, and Kendall Counties, respectively. Slight damage to chimneys was reported at Batavia and Geneva, Ill., north of Aurora, in Kane County. Two distinct shocks were observed at some places. The stronger shock also was felt in parts of Indiana, Iowa, Kentucky (Fulton County), and Wisconsin. 1917 Apr 9 20:52 5.1M Intensity VII Southern Illinois in the Mississippi River valley ( 38.1N 90.2W ) At St. Louis, Mo., several chimneys were knocked down, windows were broken, and people were thrown to the pavement. At Granite City, Mo., buildings shifted on their foundations. At DeSoto, Mo., in Jefferson County, bricks fell from chimneys and the walls of several buildings were cracked. Many windows were broken and buildings rocked at Ste. Genevieve and St. Mary, Mo., south of St. Louis near the Illinois border. Heavy rumbling preceded and accompanied the earthquake in places. Felt from Kansas to Ohio and from Wisconsin to Mississippi. 1922 Mar 22 22:29 4.8M Intensity VII Southern Illinois ( 37.4N 89.4W ) This strong earthquake knocked down 25 chimneys at Illmo, Scott County, Mo., and sent people rushing out of stores. Dishes fell from shelves at Carbondale, Ill. Also felt in Kentucky and Tennessee. 1922 Mar 23 02:22 4.6M Intensity VI Southern Illinois ( 37.4N 89.4W ) At Illmo, Mo., south of Cape Girardeau in Scott County, the earthquake knocked down many more chimneys (see description of the main shock on Mar. 22, 1922). The shock was violent at Belleville, Ill., and severe at Jonesboro, Ill. Stovepipes were downed at Cape Girardeau, Mo., and people were knocked off their feet. Also felt at Evansville, Ind. 1922 Nov 27

## Fair Economy Illinois

---

03:31 4.8M Intensity VII Near Eldorado, Illinois ( 37.8N 88.5W ) The earthquake broke several windows and downed chimneys at Eldorado. One chimney flue was demolished and stovepipes fell at Harrisburg, 8 km southwest of Eldorado. Generally felt in southern Illinois, western Indiana, northern Kentucky, eastern Missouri, and western Tennessee. 1934 Nov 12 14:45 4.0M Intensity VI Near Rock Island, Illinois ( 41.5N 90.5W ) In Rock Island and Moline, Ill., and Davenport, Iowa, bricks fell from a few chimneys and pendulum clocks stopped. In Rock Island, a stucco cornice was dislodged from St. Joseph's School; some loose plaster was shaken from ceilings in the men's dormitory at Augustana College, and loose bricks were shaken from a few buildings. 1939 Nov 23 15:14 4.6M Intensity V Near Griggs, Illinois ( 38.180N 90.137W ) [Listed without Summary in SUS. Summary from EHUS.] Intensity just short of damage. Affected area included most of Illinois, Missouri, and parts of Wisconsin, Indiana, Kansas, Kentucky, Tennessee, Mississippi, Arkansas, and Iowa. 1947 Jun 30 04:23 4.2M Intensity VI Waterloo-Dupo, Illinois, area, south of Saint Louis, Missouri ( 38.4N 90.2W ) At St. Louis, several chimneys were toppled and a sidewalk was cracked. 1953 Sep 11 18:26 4.0M Intensity VI Southwest Illinois ( 38.8N 90.1W ) At Roxana, north of East St. Louis, in Madison County, cracks formed in a concrete-block foundation and in plaster. Also felt in eastern Missouri. 1955 Apr 9 13:01 4.3M Intensity VI West of Sparta, Illinois ( 38.232N 89.785W ) Concrete foundations and plaster walls were cracked at Evansville, Ill. (about 20 km west of Sparta), and at Lemay, University City, and Webster Groves, Mo. Also felt in Kentucky and Missouri. 1958 Nov 8 02:41 4.4M Intensity VI Southeast Illinois, near Indiana border ( 38.436N 88.8W ) Plaster fell at Dale (Hamilton County) and Albion (Edwards County), and a basement wall cracked at Maunie (White County). Also felt in Indiana, Kentucky, and Missouri. 1965 Aug 14 13:13 3.4M Intensity VII Southwest Illinois ( 37.226N 89.307W ) This strong local earthquake at Tamms (Alexander County) downed chimneys, cracked walls, muddied water, and knocked stock from shelves. 1968 Nov 9 17:01 5.2M Intensity VII Southern Illinois ( 37.911N 88.373W ) This was the strongest felt earthquake in southern Illinois since the 1895 Missouri event. Property damage in the area consisted mainly of fallen bricks from chimneys, broken windows, toppled television aerials, and cracked or fallen plaster. In the epicentral area, near Dale, Hamilton County, MM intensity VII was characterized by downed chimneys, cracked foundations, overturned tombstones, and scattered instances of collapsed parapets. Most buildings that sustained damage to chimneys were 30 to 50 years old. A large twostory brick house near Dale, Ill., sustained several thousand dollars damage. About 10 km west of Dale, near Tuckers Corners, a concrete and brick cistern collapsed. A large amount of masonry damage occurred at the City Building at Henderson, Ky., 80 km east-southeast of the epicenter. Moderate damage to chimneys and walls occurred in several towns in southcentral Illinois, southwest Indiana, and northwest Kentucky. Felt over all or parts of 23 States: from southeast Minnesota to central Alabama and Georgia and from western North Carolina to central Kansas. People in multistory buildings in Boston, Mass. and southern Ontario, Canada, felt the earthquake. 1972 Sep 15 05:22 4.0M Intensity VI Northern Illinois ( 41.645N 89.369W ) Cracks in chimneys, tombstones, elevated water tanks, and plaster occurred at Amboy (Lee County), south of Rockford. Chimney and plaster cracks were observed at Holcomb, northeast of Amboy, in Ogle County. Also felt in Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio, and Wisconsin. 1974 Apr 3 23:05 4.3M Intensity VI Southeast Illinois ( 38.549N 88.072W ) Minor damage, generally in the form of cracked and broken chimneys, occurred in Wabash County. At West Salem, a few chimneys and

## Fair Economy Illinois

---

tombstones were shaken down and other chimneys were damaged. Slight damage occurred at many towns in Indiana and Illinois. Also felt in Arkansas, Iowa, Kentucky, Michigan, Missouri, Ohio, Tennessee, Virginia, and Wisconsin. 1984 Jun 29 07:58 4.1M Intensity VI Southern Illinois ( 37.7N 88.470W ) At Harrisburg, in Saline County, one house sustained structural damage. Also felt in western Kentucky and southeast Missouri. [The above summaries were abridged from Seismicity of the United States, 1568-1989 (Revised), by Carl W. Stover and Jerry L. Coffman, U.S. Geological Survey Professional Paper 1527, United States Government Printing Office, Washington: 1993 and from Preliminary Determinations of Epicenters Monthly Listing.] For a list of earthquakes that have occurred since this article was written, use the Earthquake Search.

In reference to Subpart B: Registration and Permitting Procedures

### Section 245.200 Registration Procedures

- What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom.
- What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to long term public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, Dolores A. Rapp Red Bud, IL 62278

Any construction that is put into the ground around my home is clearly marked. For safety and health reasons, the city knows where different pipes lead to, what they contain, as well as the details of other hardware that are placed underground or built into the environment. This is important because these structures affect the entire community. Therefore, it is ridiculous that fracking companies are not explicitly required to provide a map that depicts the exact location of the wellbore that they intend to drill under our shale and near our very water supply. Relevant parts of the Proposed Administrative Rules: Subpart B: Registration and Permitting Procedures (245.200-245.270)245.200 Registration Procedures

Dear Sirs, I am against ANY hydraulic fracking for the state of Illinois. I don't believe it is safe. I don't believe it will create jobs. I believe it will only poison our aquifers. The fact that the industry goes to such lengths to hide the chemical composition of the fluid they pump into these wells is especially damning. It is unconscionable to allow companies to pump undisclosed chemicals into the soil of our fair state. If our water is poisoned then it will be generations of Illinoisans living with the consequence. Pull this bill now. Do not issue ANY permits. I cannot emphasize enough how much I am against hydraulic fracking of ANY kind in this state. Regards, Christopher Kowalski

Sincerely, Christopher Kowalski 2343 N. Avers Chicago, IL 60647

### Section 245.200 Registration Procedures

Due to the risks related to the water table and the waste products produced by fracking that require special storage. There needs to be stronger language in the guidelines that specifically define violations of all types. Because if something does happen, what are the regulatory penalties and who would have to pay for the cleanup? The legislature and the IDNR need to have stronger guidelines drawn because if this is allowed in the unique areas of the Shawnee National Forest or the Cache Wetlands, the damage might be so bad that cleanup will not be possible. Overall, the regulations should ban Fracking in any forms in Illinois.

Sincerely, Eric Jason Joliet, IL 60435

### Section 245.200 Registration Procedures

Failure to address workplace rules or worker safety. Relevant parts of the Proposed Administrative Rules: Subpart A: General Provisions (245.100-245.120) Problems: The fatality rate of gas and oilfield workers is 7.6 times above all other industries and set an all-time high record in 2012 (King 2013). An inescapably dangerous work setting under the best of circumstances, frack pads are rendered even more dangerous by well operators who eschew workplace safety standards and who force employees to work excessively and dangerously long hours. Sixteen (16) to 20 hour work shifts can be scheduled with the end result that exhausted workers make mistakes in an unforgiving environment or fall asleep behind the wheel of a vehicle, often claiming their own lives and the lives of residents who happen to be on the wrong road at the wrong time (Urbina 2012). There are at least two work related dangers at frack pads that should fall under OSHA regulations: exposure to (1) radiation and (2) silica dust. Both can increase rates of cancer among exposed workers and both kinds of work-site related exposure are limited and regulated by OSHA. Yet, the oil and gas industry have found an easy way to escape regulation: simply don't test for work place exposure. Since there are no data on exposure, OSHA cannot step in and demand workplace fixes. Revisions needed: IDNR must require fracking operators to adhere to OSHA rule and regulations, especially regarding dust and radioactivity. IDNR must develop rules which recognize and regulate non-union frack operations to address inherently dangerous workplace conditions, including but not limited to work shifts, working conditions, and truck transportation to and from operations.<http://www.dnr.illinois.gov/oilandgas/pages/onlinecommentssubmittalform.aspx>

### Section 245.200 Registration Procedures

For college students, any academic infringements committed by that student stay with that student for their entire collegiate life. The reasons behind this are that any mistakes can speak to that student's potential for future infringements. The same can be said about companies. If a company is willing to break a law and have a "serious" violation then it stands to reason that that company will be willing to break the law in the future, even if it is more than 5 years between infractions. This limitation is ridiculous. also, What constitutes a serious violation needs to be well defined or no company will willingly report having had a serious violation.

### Section 245.200 Registration Procedures

Fracking in Illinois? No way! This is a terrible idea that only creates jobs for 5-10 years and destroys our environment and natural resources for an indefinite amount of time. This is a horrible idea. Would you frack your grandma's backyard? Would you frack children's playgrounds? What direction should you drill? The answer is simple. Forget the drill. Invest in solar energy instead. It's renewable and doesn't ruin our soil and groundwater. This isn't even that difficult to understand.

### Section 245.200 Registration Procedures

Healthcare workers and even people wishing to rent housing often have to submit to extensive background checks before given employment or even having their rental application approved. How is it that a fracking operator does not have to report any and all previous violations on their applications for fracking permits? Surely fracking operations, which have been demonstrated to use toxic chemicals and produce radioactive waste, have the potential to cause more harm to a greater number of people than someone attempting to rent an apartment, or even a healthcare provider? This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, Rachel Baker Chicago , IL 60625

### Section 245.200 Registration Procedures

It is too obvious that the IDNR are faking concern for what has proven a devious industry. I would like each and every IDNR staff investigated for criminal intent to destroy our environment. The science is out there easily available to determine numerous disastrous effects of these vile corporation having spilled radiation hither and about carelessly poisoning streams, dumps and even reports this date still note what they were pawning off as cool for public dumps still being under quarantine at a public dump site ill suited for the radioactive material. I do not see that the IDNR is going to measure the deadly material on site or elsewhere nor deal with it other than thinking of injection sites causing earthquakes. The politicians who authorized this need their wallets examined. The IDNR staff need to be fired immediately with no unemployment benefits because they need placement in prison.

### Section 245.200 Registration Procedures

Relevant parts of the Proposed Administrative Rules: 245.200 Registration Procedures A major flaw in this section of the rules is that the IDNR does not write out any guidelines for what counts as a 'serious violation' or 'equivalent' to disclose to the department. These guidelines need to be written out explicitly. Also, I would recommend for the department to require permit seekers to outline ALL violations in detail, as well as make this information available to the public. This way, there are more ways that Illinois residents including scientist and engineers can help in protecting our citizens from possible harm.

### Section 245.200 Registration Procedures

The private landowner's right to waive the requirements of the regulations is threaded throughout the rules. For example, if property includes springs, wells, streams, rivers, lakes, ponds and/or reservoirs the owner may waive the required setbacks for drilling near these bodies of water. These setbacks by the way (300 or 500 ft) are not measured from the edge of a body of water but from its center – potentially allowing drilling very close to or within a large body of water.

Sincerely, Sigi Psimenos 1450 Plymouth Lane Elgin, IL 60123

### Section 245.200 Registration Procedures

This comment addresses inadequacies in two sections: Sections (245.210(a)(4)) Directional Drilling Plan and Section (245.210(a)(7)) Scaled plat maps, diagrams, or cross sections, These sections do not explicitly require that the applicant provide a map that depicts the exact location of the wellbore, i.e., draws it on the map from beginning to end. This information is critical to specific notice and standing, which reference persons within 750 feet of the wellbore. Revisions Needed: Require a map depicting the exact location of the wellbore.

Sincerely, Ashley Seymour Chicago, IL 60615

### Section 245.200 Registration Procedures

This comment addresses inadequacies in two sections: Sections (245.210(a)(4)) Directional Drilling Plan and Section (245.210(a)(7)) Scaled plat maps, diagrams, or cross sections, These sections do not explicitly require that the applicant provide a map that depicts the exact location of the wellbore, i.e., draws it on the map from beginning to end. This information is critical to specific notice and standing, which reference persons within 750 feet of the wellbore. Revisions Needed: Require a map depicting the exact location of the wellbore.

Sincerely, Emerson Delgado Chicago, IL 60637

### Section 245.200 Registration Procedures

This comment addresses inadequacies in two sections: Sections (245.210(a)(4)) Directional Drilling Plan and Section (245.210(a)(7)) Scaled plat maps, diagrams, or cross sections, These sections do not explicitly require that the applicant provide a map that depicts the exact location of the wellbore, i.e., draws it on the map from beginning to end. This information is critical to specific notice and standing, which reference persons within 750 feet of the wellbore. Revisions Needed: Require a map depicting the exact location of the wellbore.

Sincerely, Karina Hendren Chicago, IL 60637

### Section 245.200 Registration Procedures

This comment addresses inadequacies in two sections: Sections (245.210(a)(4)) Directional Drilling Plan and Section (245.210(a)(7)) Scaled plat maps, diagrams, or cross sections, These sections do not explicitly require that the applicant provide a map that depicts the exact location of the wellbore, i.e., draws it on the map from beginning to end. This information is critical to specific notice and standing, which reference persons within 750 feet of the wellbore. Revisions Needed: Require a map depicting the exact location of the wellbore.

Sincerely, Navroz Tharani Chicago, IL 60615

### Section 245.200 Registration Procedures

This comment addresses inadequacies in two sections: Sections (245.210(a)(4)) Directional Drilling Plan and Section (245.210(a)(7)) Scaled plat maps, diagrams, or cross sections, These sections do not explicitly require that the applicant provide a map that depicts the exact location of the wellbore, i.e., draws it on the map from beginning to end. This information is critical to specific notice and standing, which reference persons within 750 feet of the wellbore. Revisions Needed: Require a map depicting the exact location of the wellbore.

Sincerely, Shawn Mukherji Chicago, IL 60605

In reference to Subpart B: Registration and Permitting Procedures

### Section 245.200 Registration Procedures

This comment relates to 245.200 of the proposed regs. I believe this reg needs strengthening. Companies should be required to disclose all violations of laws and regulations relating to fracking, including proposed violations that are currently being contested by the company. There should be no time limit for when the violation occurred; the current 5 year time frame should be eliminated. Reporting should not be limited to violations that the company considers serious. All violations should be reported. Fracking violations can potentially seriously harm public health and safety, so in themselves must all be considered serious. Complete reporting as described above. Long term I believe states should work together to create a database that will capture fracking violations, so that states no longer have to rely on potentially flawed self reporting in assessing the violation history of a company interested in obtaining a fracking permit.

Sincerely, Eileen Sutter 4125 North Monticello Chicago, IL 60618

## Fair Economy Illinois

---

In reference to Subpart B: Registration and Permitting Procedures

### Section 245.200 Registration Procedures

This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, B. E. Murphy 458 Tahoe Park Forest, IL 60466

### Section 245.200 Registration Procedures

This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn't report a violation because “we didn't think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

In reference to Subpart B: Registration and Permitting Procedures

### Section 245.200 Registration Procedures

This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, Chris Turner Chicago, IL 60637

### Section 245.200 Registration Procedures

This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, Elizabeth A. Cerny 7728 Williams St. Downers Grove, IL 60516

### Section 245.200 Registration Procedures

This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, Kaijie Wang Chicago, IL 60615

In reference to Subpart B: Registration and Permitting Procedures

### Section 245.200 Registration Procedures

This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, Madeline McCann Chicago, IL 60637

In reference to Subpart B: Registration and Permitting Procedures

### Section 245.200 Registration Procedures

This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” - What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. - What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, Paloma Delgadillo Plano, TX 75075

In reference to Subpart B: Registration and Permitting Procedures

### Section 245.200 Registration Procedures

This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, Sarah Kindt Chicago, IL 60607

### Section 245.200 Registration Procedures

This section of the rules states that every applicant applying for a permit must disclose to the Department “all findings of a serious violation or an equivalent violation under federal, Illinois or other state laws or regulations in the development or operation of an oil or gas exploration or production site via hydraulic fracturing by the registrant or any parent, subsidiary, or affiliate of the registrant within the previous 5 years.” What does IDNR define as a “serious” violation? There is no guideline here making it easy for violators to claim that they didn’t report a violation because “we didn’t think it was serious.” Instead, applicants should be required to disclose ALL violations alleged by public authorities and any fines or findings therefrom. What is the reason for the 5 year time limitation? When fracking violations potentially pose a threat to public health and safety, all previous violations and alleged violations should be considered when issuing a permit, regardless of how long ago they occurred.

Sincerely, Zaid Mctabi Chicago, IL 60605

### Section 245.200 Registration Procedures

To whom it may concern, my name is Eleanor Larsen and I am writing on behalf of the public and the natural environment. I have read the guidelines released by the IDNR and I find them to be completely inadequately developed to regulate a very hazardous industrial endeavor. Hydraulic fracturing is extremely dangerous and we need to take all precautions possible to mitigate the possibilities of commercial exploitation. In section 245.200 Registration Procedures, I am thoroughly dissatisfied with your failure to define the term "serious violation". The statement is vague and weak, and full of exploitive potential. You have proposed a superficial screening mandate that only acknowledges violations as defined by the indefinite term "serious". Applicants need to disclose any and all violations if they desire a permit. This includes the full history of violations of any degree committed by the applicant. The qualification of "the previous five years" is useless, arbitrary and also full of exploitive potential. We would appreciate it if the IDNR would operate out of concern for the citizens of Chicago and Illinois in the future. We are not impressed by the way you have collapsed under the pressure of the oil industry in drafting these regulations. Thank you for your time.

Sincerely, Eleanor Larsen Chicago, IL 60601

### Section 245.200 Registration Procedures

Today's fracking comment to the IDNR. Imagine 20 hour shifts for workers and a fatality rate over 7 times the industry rate. Not only does this jeopardize the workers safety, but also all of ours. I know it's Christmas, but how about giving yourself the gift of a frack free world. Feel free to cut, paste and send to the link below..... Failure to address workplace rules or worker safety. Relevant parts of the Proposed Administrative Rules: Subpart A: General Provisions (245.100-245.120) Problems: The fatality rate of gas and oilfield workers is 7.6 times above all other industries and set an all-time high record in 2012 (King 2013). An inescapably dangerous work setting under the best of circumstances, frack pads are rendered even more dangerous by well operators who eschew workplace safety standards and who force employees to work excessively and dangerously long hours. Sixteen (16) to 20 hour work shifts can be scheduled with the end result that exhausted workers make mistakes in an unforgiving environment or fall asleep behind the wheel of a vehicle, often claiming their own lives and the lives of residents who happen to be on the wrong road at the wrong time (Urbina 2012). There are at least two work related dangers at frack pads that should fall under OSHA regulations: exposure to (1) radiation and (2) silica dust. Both can increase rates of cancer among exposed workers and both kinds of work-site related exposure are limited and regulated by OSHA. Yet, the oil and gas industry have found an easy way to escape regulation: simply don't test for work place exposure. Since there are no data on exposure, OSHA cannot step in and demand workplace fixes. Revisions needed: IDNR must require fracking operators to adhere to OSHA rule and regulations, especially regarding dust and radioactivity. IDNR must develop rules which recognize and regulate non-union frack operations to address inherently dangerous workplace conditions, including but not limited to work shifts, working conditions, and truck transportation to and from operations.<http://www.dnr.illinois.gov/oilandgas/pages/onlinecommentssubmittalform.aspx>

In reference to Subpart B: Registration and Permitting Procedures

### Section 245.200 Registration Procedures

What constitutes a serious violation? I would say any violation that's not reported in the FIRST PLACE. Is there a so called "fine" for not reporting violations from the get go? Who will be doing the. Investigations on grounds. The truth is the companies in violation of these rules are most likely habitual offenders. The 5 year disclosure limit, along with the low fines potentially allows these repeat violators to operate for years. The side effects of these operations will began about the time they no longer even have to disclose it? Is this correct? Obviously these MINING operations are very lucrative, they wouldn't be there if it wasn't. At the very least the local county legislation should make it as hard as possible to obtain these permits, instead it seems they're giving the green light. No mystery that companies have already brought irreversible environmental changes to the Heritage Corridor, the I&M canal trail area, Illinois River, and countless other places along the waterways over the century, But sand mining/fracking may be the one that does us in.

Sincerely, John hunt 3219 n. Karlov apt. G Chicago, IL 60641

### Section 245.210 Permit Application Requirements

"When an application is made to frack a well site located within the limits of any city, village or incorporated town, the application shall state the name of the city, village, or incorporated town and be accompanied with a certified copy of the official consent for the high volume horizontal hydraulic fracturing operations to occur from the municipal authorities where the well site is proposed to be located. No permit shall be issued unless consent is secured and filed with the permit application." This is excellent for municipalities, but what about counties? The intent of the legislation was to recognize that local units of government should have decision-making power regarding whether to allow fracking in their jurisdictions. This section demonstrates blatant disregard for the realities of the geography of fracking in Illinois regarding cities compared to counties. Little if any fracking is anticipated within the cities of Carbondale, Marion, Decatur or other metro areas affected by the majority of fracking land leases. If prior notification and an intentional process of permitting is important for metropolitan communities, why are the proposed rules silent regarding neighborhoods in counties and the families living there? There is no substantive difference between a municipal or county government in Illinois in its powers other than the issue of Illinois Constitutional Home Rule. However, the lack of county Home Rule has never preempted a county power to issue permits on mineral or oil extraction. Numerous county governments have long histories and traditions in the permitting process regarding mineral and drilling industries. As the current fracking law is largely silent on the issue of county control, IDNR rules should err on the side of history and citizen decision-making. Counties and municipalities of government tax, employ law enforcement, provide social services and infrastructure. The rules provide no explanation why citizens residing in counties of Illinois should have less input regarding fracking permits. The regulatory differentiation between the rights of residents in municipalities vs. counties creates a group of second class citizens. These second class citizens have fewer rights in their ability to participate and ultimately determine the type and quality of energy extraction allowed in their neighborhoods. There is no reasonable expectation that the personnel at IDNR have any better or more clear understanding of the will of citizens in counties regarding fracking permits than the residents themselves. As the proposed IDNR rules envision municipalities empowered to decide fracking sites, what possible argument does IDNR have that it is better equipped or knowledgeable on the needs of residents living in Illinois counties?

### Section 245.210 Permit Application Requirements

Chemical Disclosure Report: Unclear Standards for the Exercise of Discretion by IDNR Relevant parts of the Proposed Administrative Rules: 245.210 Permit Application Requirements Problems with this section: First and foremost, Section 245.210 states that every applicant for a permit under this Part “must submit” certain information, including a Chemical Disclosure Report identifying each chemical and proppant anticipated to be used in hydraulic fracturing fluid for each state of the high volume horizontal hydraulic fracturing operations. However, Section 245.210(a)(8) allows an applicant to postpone submission of a Chemical Disclosure Report if it “documents to the Department’s satisfaction why the information is not available at the time the application is submitted [...]” Why these are problems: The criteria for documenting “to the Department’s satisfaction” are subjective, vague, and ambiguous. Fracking operators should not be able to unilaterally determine postponement of chemical disclosure report under any circumstances. Obviously, if the operator is aware of the chemical they are using there should be no allowance for delay in disclosure to IDNR. If they do not know what chemicals they are using, that should be an automatic acknowledgment they are not capable of safe operation and not be granted a permit. Needed changes: INDR must require prior disclosure of all chemicals used in the operation with no exceptions. Non-disclosure in any fashion upon filing the required Chemical Disclosure Report must be determined by the Department as grounds for not approving, or revocation of the permit.

### Section 245.210 Permit Application Requirements

From the rules: "When an application is made to frack a well site located within the limits of any city, village or incorporated town, the application shall state the name of the city, village, or incorporated town and be accompanied with a certified copy of the official consent for the high volume horizontal hydraulic fracturing operations to occur from the municipal authorities where the well site is proposed to be located. No permit shall be issued unless consent is secured and filed with the permit application." This is excellent for municipalities, but what about counties? - The intent of the legislation was to recognize that local units of government should have decision-making power regarding whether to allow fracking in their jurisdictions. - This section demonstrates blatant disregard for the realities of the geography of fracking in Illinois regarding cities compared to counties. Little if any fracking is anticipated within the cities of Carbondale, Marion, Decatur or other metro areas affected by the majority of fracking land leases. If prior notification and an intentional process of permitting is important for metropolitan communities, why are the proposed rules silent regarding neighborhoods in counties and the families living there? - There is no substantive difference between a municipal or county government in Illinois in its powers other than the issue of Illinois Constitutional Home Rule. However, the lack of county Home Rule has never preempted a county power to issue permits on mineral or oil extraction. Numerous county governments have long histories and traditions in the permitting process regarding mineral and drilling industries. As the current fracking law is largely silent on the issue of county control, IDNR rules should err on the side of history and citizen decision-making. - Counties and municipalities of government tax, employ law enforcement, provide social services and infrastructure. The rules provide no explanation why citizens residing in counties of Illinois should have less input regarding fracking permits. The regulatory differentiation between the rights of residents in municipalities vs. counties creates a group of second class citizens. These second class citizens have fewer rights in their ability to participate and ultimately determine the type and quality of energy extraction allowed in their neighborhoods. - There is no reasonable expectation that the personnel at IDNR have any better or more clear understanding of the will of citizens in counties regarding fracking permits than the residents themselves. As the proposed IDNR rules envision municipalities empowered to decide fracking sites, what possible argument does IDNR have that it is better equipped or knowledgeable on the needs of residents living in Illinois counties?

Sincerely, Paloma Delgadillo Plano, TX 75075

Hi folks, I live in rural Pope County and would appreciate the same consideration that towns, cities and other entities are getting. Seems to me the most vulnerable areas would be the larger acreage located in rural area, this the need to inform the counties would only make sense and add fairness to the process. Please keep the environment, the water and our quality of life number one...

Sincerely, Richard Marose Pope County Illinois

### Section 245.210 Permit Application Requirements

I work for a small municipal Water District in Southern Illinois. I take seven samples from various locations to an EPA lab once a month, and I am extremely concerned about what fracking will do to the quality of the drinking water. It could contaminate our clean water system and put the health of the public at risk. I am also concerned about the amount of water used in the fracking process. The amount of water used for fracking one well is almost as much as our total monthly output; using so much water will result in not having an adequate water supply for the people. These are my main concerns. They lie with: the water consumers, the landowners and their specific rights, and the long-term impacts left on this region. Thank you for your time. Erica

Sincerely, Erica Medley Grantsburg, IL 62943

### Section 245.210 Permit Application Requirements

IDNR identifies the definition of an "Affected patient" as "a person receiving health care services from a health professional for an illness or injury diagnosed by the health professional to be caused by exposure to any chemicals used in high volume horizontal hydraulic fracturing operations that are subject to a claim of trade secret by a permittee or contractor." This definition is circular: in order to learn what chemical was used, a physician must first test for it so he can prove he has a right to disclosure of the proprietary chemical. How can a doctor diagnose exposure to a secret chemical used in high volume fracking before he knows which chemicals to test for? IDNR needs to grant immediate access to these lists of chemicals to health professionals.

In reference to Subpart B: Registration and Permitting Procedures

### Section 245.210 Permit Application Requirements

Section 245.210 requires permit applicants to submit: a Water Source Management plan: "If fresh water is anticipated to be used in the high volume horizontal hydraulic fracturing treatment, a water source management plan that shall include the following information:" (source of ground or surface water, how much water to be used, months of use, methods to minimize fresh water use, methods used to minimize adverse impact to aquatic life). Problems with this section: While there is a required water management plan, this plan does not require application to local municipal, water district or other governmental control units requesting use of their ground or surface water resources. In fact, if fracking is allowed, local government has no authority to deny water to a frack well operator, even in the case of drought. There is no process for sharing the frack operator's water plan with other state or regional agencies responsible for water usage (e.g. Illinois EPA, East Central IL Regional Water Supply Planning Committee) for their input on whether the plan is adequate, and how usage relates to possible drought situations. There are no minimum regulatory thresholds regarding the amount of water to be used, the impact of water use given drought situations, actual impact on aquatic life, impact on existing human, industrial and agricultural water immediate needs, and potential future impacts. Why these are problems: The IDNR report The Drought of 2012, March 2013 identified: In 2012, the 12 counties of southern IL--where the majority of fracking leases have been obtained--experienced "D4 drought - exceptional", the most severe drought rating. From July to December 2012 the area was in continuous drought. Two of three local areas identified as "at risk public water supply" are in potential frack operation counties (Macon, Johnson, IL). These counties were identified in an IL EPA 2012 drought report as having Community Water Systems most stressed by the drought. A report by the East Central IL Regional Water Supply Planning Committee identified: Springfield has a greater than 50% probability their water system will be unable to meet projected water use with a drought of record. By 2020, Bloomington and Decatur's water systems will be inadequate to meet demand. The average water use by a frack operator is significant and will have an impact on water usage. According to federal EPA, the average frack uses 4.4 million gallons of water. And wells can be fracked multiple times. Needed changes: Any governmental unit that involves itself in local or regional water issues must review the frack operator water source management plan with the power to affirm, reject or modify the plan. If a county or geographic area is identified as being in a drought, frack operations will cease. IDNR must develop scientifically based high minimum, specific standards of water usage protecting existing human, agricultural and industrial use. A frack operator's water source management plan must adhere to these formal standards.

Sincerely, Jill Paulus 1806 Marion Ct Wheaton, IL 60187

### Section 245.210 Permit Application Requirements

Local Control How does this affect me: Who is in control Relevant parts of the Proposed Administrative Rules: 245.210 Permit Application Requirements When an application is made to frack a well site located within the limits of any city, village or incorporated town, the application shall state the name of the city, village, or incorporated town and be accompanied with a certified copy of the official consent for the high volume horizontal hydraulic fracturing operations to occur from the municipal authorities where the well site is proposed to be located. No permit shall be issued unless consent is secured and filed with the permit application. This is excellent for municipalities, but what about counties? I live in a county area, where I have a postal address of a town that I can't vote in, I vote in a village that doesn't effectively circulate the decision-making of its village officers, my water district extends into adjacent counties, as does my electric utility provider. The hydraulic fracturing industry could impact any and all of these units. The intent of the legislation was to recognize that local units of government should have decision-making power regarding whether to allow fracking in their jurisdictions. This section demonstrates blatant disregard for the realities of the geography of fracking in Illinois regarding cities compared to counties. Little if any fracking is anticipated within the cities of Carbondale, Marion, Decatur or other metro areas affected by the majority of fracking land leases. If prior notification and an intentional process of permitting is important for metropolitan communities, why are the proposed rules silent regarding neighborhoods in counties and the families living there? There is no substantive difference between a municipal or county government in Illinois in its powers other than the issue of Illinois Constitutional Home Rule. In reference to Subpart B: Registration and Permitting Procedures

### Section 245.210 Permit Application Requirements

Problems with this section: First and foremost, Section 245.210 states that every applicant for a permit under this Part “must submit” certain information, including a Chemical Disclosure Report identifying each chemical and proppant anticipated to be used in hydraulic fracturing fluid for each state of the high volume horizontal hydraulic fracturing operations. However, Section 245.210(a)(8) allows an applicant to postpone submission of a Chemical Disclosure Report if it “documents to the Department’s satisfaction why the information is not available at the time the application is submitted [...]” Why these are problems: The criteria for documenting “to the Department’s satisfaction” are subjective, vague, and ambiguous. Fracking operators should not be able to unilaterally determine postponement of chemical disclosure report under any circumstances. Obviously, if the operator is aware of the chemical they are using there should be no allowance for delay in disclosure to IDNR. If they do not know what chemicals they are using, that should be an automatic acknowledgment they are not capable of safe operation and not be granted a permit. Needed changes: INDR must require prior disclosure of all chemicals used in the operation with no exceptions. Non-disclosure in any fashion upon filing the required Chemical Disclosure Report must be determined by the Department as grounds for not approving, or revocation of the permit.

Obviously, if the operator is aware of the chemical they are using there should be no allowance for delay in disclosure to IDNR. If they do not know what chemicals they are using, that should be an automatic acknowledgment they are not capable of safe operation and not be granted a permit. Needed changes: INDR must require prior disclosure of all chemicals used in the operation with no exceptions. Non-disclosure in any fashion upon filing the required Chemical Disclosure Report must be determined by the Department as grounds for not approving, or revocation of the permit.

### Section 245.210 Permit Application Requirements

Problems with this section: First and foremost, Section 245.210 states that every applicant for a permit under this Part “must submit” certain information, including a Chemical Disclosure Report identifying each chemical and proppant anticipated to be used in hydraulic fracturing fluid for each state of the high volume horizontal hydraulic fracturing operations. However, Section 245.210(a)(8) allows an applicant to postpone submission of a Chemical Disclosure Report if it “documents to the Department’s satisfaction why the information is not available at the time the application is submitted [...]” Why these are problems: The criteria for documenting “to the Department’s satisfaction” are subjective, vague, and ambiguous. Fracking operators should not be able to unilaterally determine postponement of chemical disclosure report under any circumstances. Obviously, if the operator is aware of the chemical they are using there should be no allowance for delay in disclosure to IDNR. If they do not know what chemicals they are using, that should be an automatic acknowledgment they are not capable of safe operation and not be granted a permit. Needed changes: INDR must require prior disclosure of all chemicals used in the operation with no exceptions. Non-disclosure in any fashion upon filing the required Chemical Disclosure Report must be determined by the Department as grounds for not approving, or revocation of the permit.

Obviously, if the operator is aware of the chemical they are using there should be no allowance for delay in disclosure to IDNR. If they do not know what chemicals they are using, that should be an automatic acknowledgment they are not capable of safe operation and not be granted a permit. Needed changes: INDR must require prior disclosure of all chemicals used in the operation with no exceptions. Non-disclosure in any fashion upon filing the required Chemical Disclosure Report must be determined by the Department as grounds for not approving, or revocation of the permit.

Sincerely, Bob Venier Dixon, IL 61021

### Section 245.210 Permit Application Requirements

Problems with this section: First and foremost, Section 245.210 states that every applicant for a permit under this Part “must submit” certain information, including a Chemical Disclosure Report identifying each chemical and proppant anticipated to be used in hydraulic fracturing fluid for each state of the high volume horizontal hydraulic fracturing operations. However, Section 245.210(a)(8) allows an applicant to postpone submission of a Chemical Disclosure Report if it “documents to the Department’s satisfaction why the information is not available at the time the application is submitted [...]” Why these are problems: The criteria for documenting “to the Department’s satisfaction” are subjective, vague, and ambiguous. Fracking operators should not be able to unilaterally determine postponement of chemical disclosure report under any circumstances. Obviously, if the operator is aware of the chemical they are using there should be no allowance for delay in disclosure to IDNR. If they do not know what chemicals they are using, that should be an automatic acknowledgment they are not capable of safe operation and not be granted a permit. Needed changes: INDR must require prior disclosure of all chemicals used in the operation with no exceptions. Non-disclosure in any fashion upon filing the required Chemical Disclosure Report must be determined by the Department as grounds for not approving, or revocation of the permit.
