Illinois Department of Natural Resources Illinois Department of Natural Resources IL

Dear Illinois Department of Natural Resources,

I urge you to protect Illinois' natural resources and our public health and safety by denying Woolsey Operating Company LLC's well permit application (HVHHF Review #: 000001).

Hundreds of studies have shown that the practice of hydraulic fracturing pollutes our air, water and soil with toxic, carcinogenic and radioactive materials.

Even without any severe accident (such as the Woolsey well explosion in Fairfield in 2014), we know through air sampling, water testing and infrared footage that fracked wells leak. The proposed well site is within one mile of at least 5 known oil wells, and Woolsey Oil Corporation has a plan to flare excess methane, exposing the area nearby to toxins.

Please don't open the door to even the first fracking in IL.

Do not sacrifice the health of Illinoisans and our natural resources for a toxic industry. Please deny the Woolsey Operating Company fracked well permit.

Sincerely,

Mr. Paul Rosenberger

Subject: [External] Review Number HVHHF-000001

Dear Illinois Department of Natural Resources,

I am writing these comments in regards to the application from Woolsey Operating Company, LLC for a permit under the Hydraulic Fracturing Regulatory Act (HFRA), assigned to Review Number HVHHF-000001. The proposed well (Woodrow #1H-310408-193) in White County, Illinois would threaten public health and safety and the permit application contains a number of issues highlighted below.

The application is woefully lacking in data and information required by the Illinois legislature and Illinois DNR under the rules and regulations of the HFRA that are designed to protect public health and the environment, and so cannot be approved as submitted. For example, the permit application does not give the exact location of the two disposal wells. The locations should be given with GPS coordinates so that the public knows exactly where these wells are located.

From the information that is provided, a number of concerns arise, including but not limited to:

1. The application requests exceptionally large water withdrawals from groundwater resources that are very susceptible to depletion, and fails to include plans to recycle water or otherwise minimize water consumption.
2. The application significantly underestimates flowback volumes, and plans for inadequate containment facilities for even that amount of flowback and other chemicals/wastes that the application does estimate.
3. The application conceals information on hazardous fracking chemicals without attempting to demonstrate entitlement to trade secret protection.
4. The application includes inadequate insurance for the well, with insurance that excludes the very types of damages to private landowners' property that should be protected.
5. The operations as described in the application would fail to preserve topsoil, and the stormwater management plan is inadequate.
6. The application plans for deficient surface and groundwater sampling. Adequate sampling must be required to protect important water sources.

Thank you for your attention to my comments. Illinois DNR should reject the company's inadequate permit application that fails to protect our health and environment.

Sincerely,

Penney Rubin

Subject: [External] Review Number (HVHHF-000001) -fracking permit request

June 23, 2017

Illinois Department of Natural Resources

Attention: Oil and Gas Regulatory Staff

1 Natural Resources Way

Springfield, IL 62702

Dear Sir or Madame:

This email is in regard to Review Number (HVHHF-000001), the fracking permit request made by Woolsey Operating Company, Wichita, Kansas. We urge you to deny this fracking permit.

As taxpayers, all Illinoisans have a right to clean air, land, and water. We have the right to believe our environment will be protected by the state (and federal) government so that it will remain clean for the future, for for our children and grand children. As the manager of our state's natural resources, it is your responsibility to recognize the current scientific data that proves hydraulic fracking causes harm to the environment in countless ways and chemicals used in fracking are carcinogenic.

Added to the harmful effects of fracking is that this permit would allow fracking in the Wabash Seismic zone, a known active fault area. Dr. Douglas Wiens, professor of earth and planetary sciences in Arts & Sciences at Washington University in St. Louis has stated in a 2008 article, "I think everyone's interested in the Wabash Valley Fault because a lot of the attention has been on the New Madrid Fault, but the Wabash Valley Fault could be the more dangerous one, at least for St. Louis and Illinois," said Wiens. "The strongest earthquakes in the last few years have come from the Wabash Valley Fault, which needs more investigation." His concerns and those of other scientists provide evidence that allowing a permit in the area of the active Wabash Seismic zone is a recipe for disaster. Scientists studying the incidence of earthquakes in the areas of fracking activity in Oklahoma have confirmed that fracking activity and waster water disposal, injecting the wastewater back into the ground, does cause earthquakes. Nothing is worth destabilizing an already active seismic zone.

Knowing the area in the permit request is above the very active Wabash seismic zone, has appropriate seismic monitoring to establish current seismicity in the area of interest been carried out? Has there been application of suitable ground motion prediction models to assess the potential impact of any induced earthquakes? How can you ensure well integrity when the oil industry itself still admits they cannot guarantee it?

Where are the millions of gallons of water required for fracking going to come from and what will be the impact on local water sources? How can anyone know what the long-term environmental impact will be? Half of this fluid will never reemerge from the well and therefore will remain in the environment. How can you regulate for this? And how will you monitor the disposal of the fracking water that comes back to the surface? Will the already burden Illinois taxpayers end up footing the bill for environmental clean ups?

At a time when Illinois is struggling financially, we cannot afford to be risk takers. Fracking has proven to be a boom and bust industry so granting this permit would be a gamble Illinois will lose.

Please do not approve this permit.

Yours truly,

Rhonda S. and Robert L. Rothrock

Subject: [External] HVHHF-000001 COMMENTS

We believe that the multitude of shortcomings found in the HVHHF-000001 application for fracking in Illinois, make it obvious that there should be no way this operation can be permitted.

The potential overuse of water required for the proposed fracking seems irrational considering the prediction of impending droughts in Illinois.

The unknown effect of fracking on water sources for residents living near or directly above any drilling operation is reason enough to deny the application.

Illinois oil sites are no match to Texas and N. Dakota oil reservoirs.

Paul & Verlyn Rosenberger
