ATTACHMENT I: Conservation Plan Elements

a. Flash Grazing Plan

~~Convert crop field north of John Ehme's house and crop field to the south to primary pasture.~~
Cattle would continue to utilize the existing pasture south of the house and across the road to the east. Areas to the west and along the Spoon River adjacent to John's house and Harpers Woods, as identified in the November 29, 2006, NRCS proposal, would be divided into

5 individual pastures or paddocks and animals would be rotated between pastures every ~~couple~~ *7 days or as needed* ~~of days~~. Animals would not be completely excluded from the stream corridor but access would be significantly controlled. Grass along the river would also be allowed to grow taller and thicker to provide a better buffer. Fabric and rock will be added to the banks of both sides *of the stream crossing* in order to reduce the amount of hoof and tire erosion. Livestock to be included would range from 10-15 cows (fill in estimated herd size, i.e. 10 - 12 cows).

Revisions: _____

b. Grass Filterstrips on Driscoll Farm

Plant grass filterstrips along small tributary, approximately 1400 foot section (please verify estimated length is valid) at widths recommended by the NRCS (identify widths). This action will reduce sediment and contaminants and improve water quality in the tributary and its watershed. The filterstrips will also provide improvements in wildlife habitat.

Revisions: Total of 4 acres - 1400 feet of stream length
54' - 72' wide filter strip, ~~area~~ with varying site condition,

c & d. Grass Filterstrips and Wildlife Habitat Enhancement on Lombardville Farm

Plant grass waterways along approximately ~~4100~~ feet of ephemeral gullies on this farm and install grass filterstrips on approximately ~~2600~~ foot section along creeks at widths recommended by the NRCS (please verify estimated length is valid and provide estimate of widths). Also, on the bluff, west of the west creek, on the north end of the farm, eroding cropland will be converted to wildlife habitat (identify acres). These actions will reduce sediment and improve water quality as well as provide habitat. How will such an area be protected?

Revisions: Waterways - 5600 feet long 30' to 30' wide
Filter strips - 3200 feet long 36' to 234' wide
Wildlife habitat - 9.7 acres
